EXPERIMENT 11

CS23334 – FUNDAMENTALS OF DATA SCIENCE LAB

Pandas Library and DataFrame Operations

Aim: Create and explore DataFrames and perform common Pandas operations.

Python Program

```
import pandas as pd
data=[[1,'Smith',50000],[2,'Jones',60000]]
df=pd.DataFrame(data,columns=['EmpID','Name','Salary'])
print(df)
print(df.head())
print(df.info())
print(df.describe())
print("Mean:",df.Salary.mean())
print("Maximum:",df.Salary.max())
df['Department']=['CSE','ECE']
print(df)
```

Result

The DataFrame, information, statistics and salary calculations are displayed.

Note: For CSV programs, keep the named CSV file in the same folder and check that column names match.
