EXPERIMENT 9

CS23334 – FUNDAMENTALS OF DATA SCIENCE LAB

Matplotlib Visualization Using Iris Dataset

Aim: Explore Iris data and visualize its features.

Python Program

```
import pandas as pd
import seaborn as sns
import matplotlib.pyplot as plt
df=pd.read_csv('Iris_Dataset.csv')
print(df.info())
print(df.describe())
print(df['variety'].value_counts())
sns.countplot(x='variety',data=df); plt.show()
sns.scatterplot(x='SepalLengthCm',y='SepalWidthCm',hue='variety',data=df)
plt.show()
sns.pairplot(df,hue='variety'); plt.show()
```

Result

Dataset statistics, species counts, count plot, scatter plot and pair plot are displayed.

Note: For CSV programs, keep the named CSV file in the same folder and check that column names match.
